DENTAL FORM

Please read, complete, and return with your anesthesia papers.

Imagine how your teeth would look and feel if you didn't brush them daily. The same applies to your pet's teeth. Unless you are regularly providing some form of dental care, you are neglecting an important factor in the overall health of your pet.

Now that we have professionally cleaned your pet's teeth, you have the opportunity to start over and try to keep them free of tarter. There are many different ways to prevent tarter from building up again. Please check the ones you would be willing to do or that your pet would allow you to do and we will provide you with the materials or samples to get started.

_____ 1. Brush everyday. (This is the gold standard and the best option)

_____ 2. Put something in your pet's water daily.

_____ 3. Feed a special food.

_____ 4. Chews or treats.

_____ 5. My pet will not allow me to do any of these or I am not interested in any
